## Case Study

Date: May 2013

## Skin Care Systems

### Nature of Organisation:

BOSCH are the largest Auto-Electrical components supplier in the world. Within the BOSCH Group, the Automotive Electronics Division develops, produces and sells microelectronic products for automotive and non-automotive applications. BOSCH recently announced the opening of its purpose-built training centre for use by their apprentices and distributors.

### Customer's Need:

BOSCH required a top-class skin safety system that:

1. Protected hands from potentially harmful contaminants
2. Met health and safety requirements
3. Provided easy-to-understand instructions
4. Provided a cost effective solution
5. Was visually appealing within their new, purpose-built facility

### Swarfega Solution:

The new Swarfega Skin Care System comprises a complementary range of skin care products to protect hands and support activities to overcome obstacles and encourage apprentice motivation to comply with a skin safety philosophy.

The system meets health and safety requirements and delivers an reduced cost in use against traditional 'dip-in' buckets due to the product cartridge's measured shot size.

Deb's Skin Protection Centres and their associated dispensers are colour coded for ease of identification including 'how to use images'.

### Swarfega Products:

- Swarfega Skin Safety Centre (SSC1EACH)
- Swarfega Protect (SPR1LC)
- Swarfega Orange (SORC4LTR)
- Swarfega Restore (SRE1LC)

Working closely with Deb on this project, we are delighted to have installed the Swarfega skin care system into our new training facility. The system, that includes pre-work and after-work creams, provides a reduced risk of dermatitis for all of the staff using it.

Ken Geer, BOSCH Chief Training Officer
